

Lab 11: Accessible Custom Components & widgets

Muna Adan

040843043

Question 2:

1.) What is the keyboard interaction missing

The keyboard interaction is missing the ability to tab. You should be able to click enter, or the space bar button and the function should expand the accordion. In the original state of the code, we are not able to do so.

2.) What is the ARIA missing

The missing Aria includes aria-labelledby, aria-expanded, aria-controls and Aria: region role

3.) Any additional enhancement you think of?

Based on the code given to us, how we could enhance the user experience would be to:

- Proper use of semantic HTML: Header, Footer, Nav, sectioning elements ect...
- We could increase the contrast and improve readability
